PROFESSIONAL SUMMARY [Check: danishan4u.in/about]

Backend Engineer with 3+ years of experience designing, building, and scaling production-grade backend systems using Node.js and C++. Experienced in distributed systems, real-time communication, transaction processing, caching, and Linux-based infrastructure. Proven ownership of critical features from architecture and development to deployment and production support. Strong foundation in system design, database optimization, scalability engineering, and high-availability applications.

TECHNICAL SKILLS [Check: danishan4u.in/skill]

- **Languages:** TypeScript (Node.js), C++, Python
 - **Backend:** Node.js, Express, REST APIs, WebSockets
 - **Databases:** MongoDB, MySQL, PostgreSQL
 - **Infrastructure:** Linux, nginx, pm2, VPS deployment
 - **Distributed Systems:** Redis, Kafka, Pub/Sub, Event-Driven Architecture
 - **CS Foundations:** Data Structures, Algorithms, DBMS, Operating Systems, Computer Networks, System Design
-

WORK EXPERIENCE [Check: danishan4u.in/experience]

- **itsRIGHTtime | Software Development Engineer - II (SDE-II) | Jan'26 - Present:** Lead backend development for iRtNexus, owning end-to-end delivery of business-critical features from requirements to production. Design scalable services and distributed workflows using Node.js. Drive architecture discussions, code reviews, engineering standards, and mentoring initiatives across the team.
 - **JKC Softwares | SDE-II < SDE-I < SDE Intern | May'23 - Jan'26:** Design and implement scalable backend systems using Node.js and C++. Lead end-to-end development of critical features from architecture to production deployment. Improve system performance, reliability, and distributed workflows. Conduct code reviews, mentor junior engineers, and contribute to design decisions.
-

KEY PROJETS [Check: danishan4u.in/project] [[GitHub](#)]

- **iRtNexus - Organizational Operating Infrastructure (Node.js, C++, MySQL, Redis, Kafka):** Developed core backend services for a modular organizational operating platform unifying communication, execution, governance, and operational intelligence through a shared architecture.
 - **CasGamPro - (Node.js, MySQL, REST APIs, Redis, Kafka, etc.):** Designed a distributed real-time gaming platform with a pluggable game engine and 5-tier hierarchical commission model.
 - **Custom Application Server Infrastructure (Node.js, Nginx, Linux, PM2):** Designed and deployed production-grade Node.js servers with Nginx reverse proxy, SSL termination, and zero-downtime clustering. Optimized server utilization and handled production debugging and performance tuning.
 - **Secure Mail Server System (Node.js, SMTP, MySQL):** Developed an email server supporting send/receive flows, authentication, spam handling, and structured persistence for auditing. Implemented attachment handling and reliable delivery mechanisms for production use.
 - **Scalable Real-Time Communication Engine (Node.js, Socket.IO, Redis):** Built a high-performance real-time messaging layer supporting 1-1, rooms, and broadcast communication. Implemented Redis Pub/Sub for horizontal scaling across instances with authentication and rate limiting.
-

EDUCATIONAL BACKGROUND

B-Tech CSE (Computer Science and Engineering) Amity University, Uttar Pradesh **[8.66/10]**

Relevant Coursework: System Design, Data Structures, DBMS, Operating Systems, Computer Networks, Software Architecture, Compiler Construction, Artificial Intelligence, Machine Learning

Note: Hands-on experience with distributed systems, event-driven architecture, and horizontal scaling. Strong exposure to CI/CD, Docker, and production monitoring on Linux-based deployment pipelines.
