PROFESSIONAL SUMMARY [Check: danishan4u.in/about]

Backend Engineer with 2.5+ years of experience building and scaling production-grade systems using Node.js and C++. Strong foundation in system design, distributed systems basics, and infrastructure-aware backend development. Experienced in designing RESTful services, optimizing database performance, and deploying scalable applications in Linux environments. Proven ownership of features from design to production in high-availability systems.

TECHNICAL SKILLS [Check: danishan4u.in/skill]

- **Languages:** JavaScript (Node.js), C++, Python
 - **Backend:** Node.js, Express, REST APIs
 - **Databases:** MongoDB, MySQL
 - **Infrastructure:** Linux, nginx, pm2, VPS deployment
 - **Architecture:** System Design, OOP, Design Patterns
 - **Caching & Realtime:** Redis, Socket.IO
 - **CS Foundations:** Data Structures, OS, Networking, AI/ML fundamentals
-

WORK EXPERIENCE (Full Time) [Check: danishan4u.in/experience]

- **Software Development Engineer - II (SDE-II) | JKC Softwares LLP | Mar 2025 - Present:** Design and implement scalable backend systems using Node.js and C++, leading end-to-end development of critical features from architecture to deployment. Drive performance and reliability improvements, optimize distributed workflows, conduct code reviews, and mentor engineers, while collaborating with Product, QA, and DevOps to ensure high-quality releases.
 - **Software Development Engineer - I (SDE-I) | JKC Softwares LLP | Nov 2023 - Mar 2025:** Developed and optimized full-stack MERN applications, building robust, scalable system architectures. Collaborated across teams to deliver projects on time, focused on problem-solving, performance optimization, and continuous learning to enhance both technical solutions and team effectiveness.
-

KEY PROJETS [Check: danishan4u.in/project] [[GitHub](#)]

- **Scalable Real-Time Communication Engine (Node.js, Socket.IO, Redis):** Built a high-performance real-time messaging layer supporting 1-1, rooms, and broadcast communication. Implemented Redis Pub/Sub for horizontal scaling across instances with authentication and rate limiting.
 - **Custom Application Server Infrastructure (Node.js, Nginx, Linux, PM2):** Designed and deployed production-grade Node.js servers with Nginx reverse proxy, SSL termination, and zero-downtime clustering. Optimized server utilization and handled production debugging and performance tuning.
 - **IndiaBills - Billing & Invoicing Backend (Node.js, MySQL, REST APIs):** Architected REST APIs for invoicing, inventory, and reporting with optimized relational schema and indexing strategies. Improved reporting performance and ensured transactional consistency for workflows.
 - **Secure Mail Server System (Node.js, SMTP, MySQL):** Developed an email server supporting send/receive flows, authentication, spam handling, and structured persistence for auditing. Implemented attachment handling and reliable delivery mechanisms for production use.
-

EDUCATIONAL BACKGROUND

B-Tech CSE (Computer Science and Engineering) Amity University, Uttar Pradesh **[8.66/10]**

Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Software Architecture, Compiler Construction, Artificial Intelligence, Machine Learning

Note: Hands-on experience with distributed systems, event-driven architecture, and horizontal scaling. Strong exposure to CI/CD, Docker, and production monitoring on Linux-based deployment pipelines.
