PROFESSIONAL SUMMARY

Backend Software Engineer with 3+ years of experience designing and building scalable backend systems, distributed services, and production-grade applications using Node.js and TypeScript. Experienced in architecting RESTful APIs, event-driven systems, real-time communication platforms, and high-performance backend infrastructure. Proven ability to own features from system design through deployment, optimize database performance, and improve application scalability across Linux-based production environments. Strong foundation in distributed systems, software architecture, and engineering best practices.

CORE COMPETENCIES

- | | | |
|---------------------------|----------------------------|------------------------|
| • Backend Architecture | • System Design | • Linux Infrastructure |
| • Distributed Systems | • Database Design | • Technical Leadership |
| • REST API Design | • Performance Optimization | • Code Reviews |
| • Event-Driven Systems | • Caching Strategies | • Scalable Backend |
| • Real-Time Communication | • Production Debugging | Development |

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, C++, Python, SQL
- **Backend:** Node.js, Express.js, REST APIs, WebSockets, Socket.IO, Authentication, Authorization, JWT, OAuth2
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis
- **Distributed Systems:** Kafka, Redis Pub/Sub, Event-Driven Architecture, Message Queues, Horizontal Scaling
- **Infrastructure:** Linux, Docker, Nginx, PM2, Git, CI/CD
- **CS Fundamentals:** Data Structures, Algorithms, DBMS, Operating Systems, Computer Networks

PROFESSIONAL EXPERIENCE

JKC Softwares LLP | May 2023 - Present

Software Development Engineer - II | March 2025 - Present

Promoted from Software Development Engineer - I (Nov 2023 - Mar 2025) and Software Developer Intern (May 2023 - Nov 2023).

- Lead the design and development of scalable backend systems using **Node.js, TypeScript, C++, MySQL, Redis, and Kafka**.
- Own end-to-end delivery of backend features, from architecture and implementation to deployment and production support.
- Design REST APIs, distributed services, and event-driven workflows for enterprise-scale applications.
- Improve scalability and performance through database optimization, caching, and asynchronous processing.
- Participate in architecture discussions, code reviews, and technical mentoring to improve engineering quality.

Software Development Engineer - I | November 2023 - March 2025

- Developed production-grade backend services, REST APIs, and business modules using Node.js and related technologies.
- Built secure authentication workflows, optimized database performance, and contributed to production deployments.
- Collaborated on system architecture, debugging, and feature delivery for enterprise applications.

Software Developer Intern | May 2023 - November 2023

- Assisted in developing backend modules, APIs, and production features while gaining hands-on experience with enterprise software development.
- Contributed to debugging, testing, performance improvements, and production support.

SELECTED ENGINEERING PROJECTS

1. Secure Mail Server Platform | Node.js • PostgreSQL • Docker • SMTP • IMAP • Linux

- Designed and developed a containerized multi-domain mail server platform supporting secure email sending and receiving.
- Built centralized management for organizations to create and manage multiple domains and unlimited mail accounts.
- Implemented one-click Docker-based deployment with automated service provisioning and persistent data management.
- Developed secure authentication, structured mail storage, attachment handling, and production-ready mail processing workflows.

2. Application Server Infrastructure | Node.js • Docker • Linux • Nginx • PM2

- Built a self-service deployment platform for hosting and managing Node.js applications through a web dashboard.
- Automated application deployment, repository setup, reverse proxy configuration, SSL integration, and process management.
- Eliminated manual server configuration by orchestrating deployment and infrastructure provisioning through Docker-based services.
- Simplified production deployment workflows while improving operational consistency and maintainability.

3. iRtNexus - Organizational Operating Platform | Node.js • TypeScript • MySQL • Redis • Kafka

- Developed core backend services for a modular organizational operating platform supporting communication, workflow execution, and organizational operations.
- Designed scalable REST APIs and event-driven services using Redis and Kafka.
- Contributed to backend architecture, distributed processing, and production deployments.

4. CasGamPro - Distributed Gaming Platform | Node.js • MySQL • Redis • Kafka • WebSockets

- Built backend services for a real-time gaming platform with modular game architecture and transaction processing.
- Designed configurable multi-level commission workflows and distributed event-driven processing.
- Optimized backend services for scalable, high-throughput production environments.

5. IndiaBills - Billing & Business Management Platform | Node.js • TypeScript • MySQL • REST APIs

- Developed backend modules for invoicing, billing, customer management, and business operations.
- Designed secure REST APIs supporting day-to-day financial and operational workflows.
- Built scalable backend services with a focus on maintainability, performance, and reliable business processing.

EDUCATION

Bachelor of Technology (B.Tech.) - Computer Science & Engineering,
Amity University, Uttar Pradesh | CGPA: 8.66 / 10

LANGUAGES

English (Professional), Hindi (Native)
